

St Christopher's Primary School

Vision and Principles

At St Christopher's our vision for Geography is to provide a way of looking at the world, people, places and the environment, helping us to understand why they are important to us, how they are changing, and how they might develop in the future. Geography is important to our pupils because it helps them understand how people and natural ecosystems around the world are interconnected. We study Geography across various scales of enquiry: individual, local, regional, global. Our children develop practical geographical skills encompassing field-work, problem solving, map work and ICT to help them answer questions about the natural and human world.

Our Geography teaching and learning is good when:

We know about globally significant places and their key characteristics

We learn about the processes that make different geographical features

We learn geographical skills, including fieldwork, and use them to analyse information and present our learning in different ways

We use maps, diagrams, globes, photographs etc and get information from them

We make connections between what we have learned
